Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"Purification and characterization of a stable cysteine protease
ervatamin B, with two disulfide bridges, from the latex of Brvatamia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            J. Agric. Food Chem. 48:171-179(2000).
-!- FUNCTION: Cysteine protease.
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUB SPECIFICITY: Lattcifer.
-!- PTM: Not glycosylated.
-!- PTM: Not glycosylated.
-!- PTM: Ascalansous. Active over the pH range 3.0-10.5 and up to 62 degrees Celaius. Stable in 8 M urea and 2.5 M GuHCl at neutral in 40% acetonitrile, 70% ethanol and 50% methanol. Unstable in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            "Proposed amino acid sequence and the 1.63 A X-ray crystal structuce a plant cysteine protease, ervatamin B: some insights into the structural basis of its stability and substrate specificity."; Proteins 51:489-497(203).

Antiallergic compositions containing an anti-histamine, a histamine synthesis inhibitor, and optionally an allergen or nucleic acid coding

Claim 13; Page 30-31; 32pp; French.

for the allergen.

The invention relates to antiallergic compositions containing an anti-histamine, a histamine synthesis inhibitor, and optionally an allergen or isolated nucleic acid molecule that has at least one polymucleotide sequence coding for the allergen, together with a pharmaceutical carrier.

```

The present invention relates to an antiallergic pharmaceutical

Claim 7; Page 27-28; 33pp; French

```
ö
composition (I) comprising a pharmaceutical carrier containing an active agent combination of at least two of; an allergen; an antihistemaine; and a histamine synthesis inhibitor. (I) is used for treating or preventing allergic hypersensitivity reactions, especially allergic asthma, allergic rhintis or allergic toppic eczema, in babies, children or adults. The present sequence is cysteine protease from Dermatophagoides pteronyssinus, which was used as an allergen in the invention
                                                                                                                                                                                                                                                                                                                          120
                                                                                                                                                                                                                                                                                                                                                                                               180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         8
                                        The invention relates to an isolated peptide of the major protein

allergens of the genus Dermatophagoides, which comprises at least one T

call group of a protein allergen from Der p (DP) I, Der f (DF) I

cor DF II. The isolated peptide comprises at least two regions, each

region comprising at least one T cell group of a protein allergen of the

genus Dermatophagoides. The regions are derived from the same or

different protein allergens of the genus Dermatophagoides. The peptides

are useful for treating house dust mite allergy in humans. The peptides

are also useful for detecting or diagnosing sensitivity to house dust

mite protein allergens. The present peptides have similar or enhanced

therapeutic properties as the naturally-occurring allergen, but have

creduced side effects, and increased solubility and stability. The present

sequence represents an allergenic protein from Dermatophagoides from

which the T-cell epitope containing peptides are derived, a polymorphic

variant of Der p I. Note: The present sequence is not shown in the

specification but is derived from the Der p I sequence shown in figure 22

The present invention describes a method for the production of a recombinant mite Group 1 protein (I). The method comprises culturing a methyltrophic yeast microorganism transformed with a nucleic acid molecule (II) encoding (I), and recovering (I), or culturing Escherichia coli transformed with (II) under conditions in which (I) forms an inclusion body in E. coli, isolating the inclusion body, and recovering (I). Also described is a method for detecting mite allergy in an animal comprising: (a) contacting (I) with a putative igE-containing substance to form a complex between (I) and IgE; and (b) determining the presence of reactive with (I) by detecting the complex, where the presence of reactive igE is indicative of mite allergy in the animal. (I) is useful for detecting mite allergy in an animal, or in a composition to reduce allergic response to a mite Group I protein in a mite allergic animal.

(I) is also useful in a composition for treating or preventing allergic, infectious or other diseases. AAH22336 to AAH22394 and AAB98136 to AAB98149 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   61 ELVDCASQHGCHGDTI PRGIEYIQHNGVVQESYYRYVAREQSCRRPNAQRFGISNYCQIY 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             US6268491-B1
```

```
The invention relates to an isolated peptide of the major protein allergens of the genus Dermatophagoides, which comprises at least one T cell group of a protein allergen from Der D (DP) I, DP II, Der f (DP) I or DF II. The isolated peptide comprises at least two regions, each region comprising at least one T cell group of a protein allergen of the genus Dermatophagoides. The regions are derived from the same or different protein allergens of the genus Dermatophagoides. The regions are derived from the same or care useful for treating house dust mite allergy in humans. The peptides are useful for detecting or diagnosing sensitivity to house dust interapeutic properties as the naturally-occurring allergen, but have reduced side effects, and increased solubility and stability. The present sequence represents an allergenic protein from Dermatophagoides from which the T-cell epitope containing peptides are derived, a polymorphic variant of Der p I. Note: The present sequence is not shown in the specification but is derived from the Der p I sequence shown in figure 22
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      121 PPNVNKIREALAQTHSAIAVIIGIKDLDAFRHYDGRTIIQRDNGYQPNYHAVNIVGYSNA 180

The invention relates to a recombinant allergen (I) which is a mutant of a naturally occurring allergen, where the mutant allergen has at least C four primary mutations, which each reduce the specific immunoglobulin E (10g) binding capability of the mutated allergen as compared to the IgE binding capability of the naturally occurring allergen, where each primary mutation is a substitution of one surface-exposed amino acid cresidue with another residue, which does not occur in the same position in the amino acid sequence of any known homologous protein within the taxonomic species from which the naturally occurring allergen originates, and each primary mutation is spaced from each other primary mutation by at least 15 Angstrom and the primary mutations are placed in such a manner that at least one circular surface region with a area of 800 comprising two or more of the recombinant allergens, where they variant comprising two or more of the recombinant allergens, where the variant capsent in at least one of the other variants, and for each variant not secondary mutation; a DNA sequence encoding the recombinant allergen from each absent in at least one of the other variants, and for each variant not secondary mutation; a DNA sequence encoding the recombinant allergen confidence which hybridises to it under stringent confittons, where the sequence encodes a peptide having at least one B cell epitope; and experime of the recombinant allergen is useful as a pharmaceutical for preparing and pharmaceutical for preventing and/or treating allergy, or in expression vector comprising the DNA and a host cell comprising the comprising and assessed for the level of reactivity between the recombinant allergen and assessed for the level of reactivity between the recombinant allergen and assessed for the level of for the recombinant allergen or treatment of a subject, or for vectorizing or treatment of a subject or for the recombinant proversion or resonance or preparion or preparion or treatment of a subject or sequence or ever
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  reatment, prevention or alleviation of allergic reactions in a subject a.g. hay fever, rhinoconductivitis, rhinitis, asthma or systemic anaphylaxis. The allergens and also antibodies raised against them, are useful for diagnosis and treatment of allergies to house dust mites. When expressed in plants, allergens are synthesized and matured to biologically active form, with essentially the same pattern of glycosylation as the native protein. Recombinant expression provides a pure protein; contrast complex mixtures of allergens currently used. The present sequence represents Der pl allergen.

The invention relates to novel compositions including contiguous coverlapping peptide fragments which together form an entire amino acid sequence of an allergen, where the fragments are capable of inducing a T-cell response in patients who are hypersensitive to the allergen. The contiguous overlapping peptide fragments further result in lower levels of IgE stimulation activity. The lower levels of IgE stimulation activity. The lower levels of IgE stimulation activity are zero or weak. The contiguous overlapping peptide fragments further result in a decrease in T-cell response upon subsequent exposure to the allergen, thus, modulating an immune response in the patients, who are hypersensitive to the allergen. A composition of the invention has a cariallergic activity, and may have a use in gene therapy, and as a vaccine. The composition and methods are useful for preventing or treating IgE-mediated allergies. The present sequence represents an allergen of the invention, dust mite Der pl.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New compositions including contiguous overlapping peptide fragments that form an entire amino acid sequence of an allergen (e.g. bee venom or birch pollen allergen), useful for preventing or treating IgE-mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9

```
different protein allergens of the genus Dermatophagoides. The peptides are useful for treating house dust mite allergy in humans. The peptides are useful for treating house dust mite allergy in humans. The peptides are also useful for detecting or diagnosing sensitivity to house dust mite protein allergens. The present peptides have similar or enhanced therapeutic properties as the naturally-occurring allergen, but have reduced side effects, and increased solubility and stability. The present sequence represents an allergenic protein from Dermatophagoides from which the T-cell epitope containing peptides are derived, a polymorphic variant of Der p I. Note: The present sequence is not shown in the specification but is derived from the Der p I sequence shown in figure 22
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              121 PPNANKIREALAQTHSAIAVIIGIKDLDAFRHYDGRTIIQRDNGYQPNYHAVNIVGYSNA 180

The invention relates to a feeducing an entergent of a mutual to a naturally occurring alleagen, where the mutant alleagen has at least four primary mutations, which each reduce the specific immunoglobulin E (IgB) binding capability of the mutated alleagen as compared to the IgB binding capability of the mutaned alleagen as compared to the IgB chinding capability of the mutaning alleagen, where each primary mutation is a substitution of one surface-exposed amino acid residue with another residue, which does not occur in the same position of in the amino acid sequence of any known homologous protein within the taxonomic species from which the naturally occurring alleagen originates, and each primary mutation is spaced from each other primary mutation by at least one circular surface region with a area of 800 and secondary mutation is spaced from each other primary mutation by at least one circular surface region with a area of 800 comprises no mutation. Also included area composition comprising two or more of the recombinant allergens; where the valeant is at least one of the other variants, and for each variant no secondary mutation is present within a radius of 15 Angetrom from each absent primary mutation; a DNA sequence encoding the recombinant allergen cor its derivative, partial sequence or degenerated sequence, or a sequence which hybridises to it under stringent conditions, where the corpusing the DNA and a host cell comprising the C expression vector comprising the DNA and a host cell comprising the C vector. The recombinant allergen is useful as a pharmaceutical, for vector. The recombinant allergen is useful as a pharmaceutical, for the recombinant allergen and the recombinant allergen wineful for perventing an immune remarking and the recombina
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

The invention relates to a recombinant allergen (I) which is a mutant of a naturally occurring allergen, where the mutant allergen has at least cour primary mutations, which each reduce the specific immunoglobulin E (19E) binding capability of the mutated allergen as compared to the IgE binding capability of the maturally occurring allergen, where each binding capability of the naturally occurring allergen, where each binding capability of the naturally occurring allergen, where each binding capability of the naturally occurring allergen, where each creation with another residue, which does not occur in the same position in the amino acid sequence of any known homologous protein within the caxonomic species from which the naturally occurring allergen originates, and each primary mutation is spaced from each other primary mutation by at least one circular sufface region with a area of 800 Angstrom ^2 comprises no circular sufface region with a area of 800 Angstrom of mutation. Also included are a composition comprising two or more of the recombinant allergens, where the variant not least one of the other variants, and for each variant not secondary mutation is present within a radius of 15 Angstrom from each obsent primary mutation; a DNA sequence encoding the recombinant allergen or its derivative, partial sequence or degenerated sequence or definitions, where the comprising the bunder stringent conditions, where the sequence encodes a peptide having at least one B cell epitope; and expression vector comprising the DNA and a host cell comprising the present in a harmanelial for preventing as pharmaceutical, for preventing as pharmaceutical.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               preparing a pharmaceutical for preventing and/or treating allergy, or in a diagnostic assay for assessing relevance, safety or outcome of therapy of a subject, where an IBE containing sample of the subject is mixed with the recombinant allergen and assessed for the level of reactivity between the IBE in the sample and the recombinant allergen. The recombinant allergen or compositions are useful for generating an immune response in a subject, for vaccination or treatment of a subject or for the treatment, prevention or alleviation of allergic reactions in a subject
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 e.g. hay fever, rhinoconductivitis, rhinitis, asthma or systemic anaphylaxis. The present sequence represents a recombinant allergen of the invention. Note: The present sequence was not shown in the specification but was created by the indexer using information in the specification and the corresponding wild-type sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New recombinant mutant allergen, useful for preventing and/or treating allergy, comprises multiple mutations and reduced immunoglobulin E

Also included are a composition comprising two or more of the recombinant allergens, where the variant

nbinant mutant allergen, useful for preventing and/or treating comprises multiple mutations and reduced immunoglobulin \boldsymbol{E} recombinant mutant binding affinity.

Example 7; Page; 210pp; English.

The invention relates to a recombinant allergen (I) which is a mutant of a naturally occurring allergen, where the mutant allergen has at least (our primary mutations, which each reduce the specific immunoglobulin E (igg) binding capability of the mutated allergen as compared to the IgE binding capability of the mutated allergen, where each primary mutation is a substitution of one surface-exposed amino acid residue with another residue, which does not occur in the same position comparison of primary mutation is spaced from each other primary mutation by at least primary mutation is spaced from each other primary mutation by at least to manner that at least one circular surface region with a area of 800 and manner that at least one circular surface region with a area of 800 and manner that at least one circular surface region with a area of 800 and manner that a least one circular surface region with a area of 800 and position comprising two or more of the recombinant allergens, where the variant allergen is defined by having at least one primary mutation; and for each variant of secondary mutation is present within a radius of 15 Angstrom from each obsent in at least one of the other variants, and for each variant or sequence which hybridises to it under stringent conditions, where the sequence encodes a peptide having at least one B cell epitope; and expression vector comprising the DNA and a host cell comprising the expression vector comprising the DNA and a host cell comprising the cyperaring a pharmaceutical for preventing and/or treating allergy, or in expression vector comprising relevance, safety or outcome of therapy or a subject, where an IgE containing sample of the subject is mixed with the recombinant allergen and assessed for the level of reactivity between the IgE in the sample and the recombinant allergen or latergen o invention relates to a recombinant allergen (I) which is a mutant of e.g. hay fever, rhinoconductivitis, rhinitis, asthma or systemic anaphylaxis. The present sequence represents a recombinant allergen of the invention. Note: The present sequence was not shown in the indexer using information in the specification but was created by the indexer using infespecification and the corresponding wild-type sequence
